Planning for Change: Issues of Implementation and Scale

William R. Penuel
Professor of Educational Psychology and Learning Sciences
School of Education
University of Colorado Boulder
Beginning with Images of Practice

• Capitalizing on students’ interests and experiences
• Identifying and building on what students know
• Providing students with experiences to engage them in the practices of science and sustain their interest
Capitalizing on Interest and Experience

Identifying and Building on What Students Know

*Elicitation Questions help teachers find out what students know at the beginning of investigations.*
Why do scientists develop models?
Why might scientists need a model of Earth’s interior?

*Reflect and Revise Questions identify students’ understanding of core ideas.*
How can water cause rocks to weather?
What’s the best evidence for what Earth’s interior looks like?
Identifying and Building on What Students Know

Talk moves help teachers build on what students know and engage students in the scientific practice of argumentation.

“Say more about that.”

“What’s your evidence for…?”

“So I think you’re saying….Do I have that right?”

How Can You Plan for Implementation?

“...Implementation may not be as unpredictable as we’ve been led to believe. Although adjustments are likely to occur at multiple places and repeatedly over time, the implementation process has junctures that can be identified and defined in ways that may increase the predictability of how programs are likely to be used.”

(Weinbaum & Supovitz, 2010, p. 69)
## Junctures in Planning Implementation

| Designing or adapting professional development | What should the professional development look like?  
Who can serve as a resource to their colleagues after initial workshops? |
| Building ownership                | What is a compelling argument for why teachers should try out the materials or implement the program?                                             |
| Evaluation design and implementation | What evidence do we need to measure the value or worth of the materials or program?                                                                  |
Later in the Day

• You will engage in a “prologue to planning.”
• The template does not look like a traditional planning document.
• The template invites you to consider:
  – The location of expertise relevant to implementation of evidence-based practices.
  – A broad strategy for organizing for change.
Big Ideas for Afternoon (Handout)

1. People sharing resources and expertise facilitates implementation.

2. Expertise is needed for each side of the “instructional triangle.”

3. Diffusion happens through networks.

4. Implementing new practices is like organizing a campaign in a social movement.
Thank you.

Big Idea #1: People sharing resources and expertise facilitates implementation.
Big Idea #2:
Expertise is needed for each side of the “instructional triangle.”
Professional development focused on teaching strategies
Eliciting interests, experiences, and cultural funds of knowledge from local practices
Relating everyday and scientific forms of thing (building on student ideas)
Engagement in practices

Professional development focused on curriculum implementation
Content-focused
Emphasize coherence with district goals
Facilitate interactions with more expert colleagues

Resources for supporting implementation
Teachers guide that emphasizes likely student responses to curriculum
Embedded assessments

STUDENTS
TEACHER
RESOURCES
Prologue to Planning

Big Idea #3: Diffusion happens through networks.
Hierarchy, Network, or Both?

Social network diagram from: Daly & Finnigan (2009)
Nodes and Ties

**Organizational Nodes**
State Departments of Education
STEM networks
Schools and Colleges of Education
District curriculum offices
Independent PD providers
Textbook and materials providers

**Individual Nodes**
State directors
District curriculum supervisors
Principals
Teacher leaders/coaches
Teachers
Nodes and Ties

Organizational Nodes
State Departments of Education
STEM networks
Schools and Colleges of Education
District curriculum offices
Independent PD providers
Textbook and materials providers

Individual Nodes
State directors
District curriculum supervisors
Principals
Teacher leaders/coaches
Teachers

Types of Ties
Dissemination of information
Teaching (e.g., professional development workshops)
Ongoing guidance (e.g., coaching)
Joint Work

Characteristics of Ties
Strength/Closeness
Differences in Knowledge
Networks and School Change

• Big Idea 3.1: Every node (organization or person) needs access to an expert.

• Big Idea 3.2: Every node doesn’t need to be connected to every other node. Otherwise, there are too many cooks in the kitchen.

The ‘New’ Science of Networks and The Challenge of School Change

To promote effective teacher collaboration, school leaders must examine all the social networks already in place and must ensure that expertise and other social resources are available at multiple levels in the school community.

By William R. Penuel and Margaret Riel

WHAT DO finding a job, finding others who share an interest in quitting, getting medical advice, and improving teaching and learning have in common? All of these actions require individuals to draw on information or expertise through their ties to others in social networks. The study of people’s social ties, the resources they obtain from them, and the communication tools — such as the Internet — that facilitate the flow of expertise and resources makes up an evolving science of networks that can help us better understand how to support and promote school change.

The science of networks is not new in itself, but its application to the functioning of schools is. Sociologists have used mathematical methods for analyzing social networks since the 1960s and 1970s to study how people use social ties to find information, resources, and even other people to help them accomplish their goals. Some of the earliest diagrams made of social networks concerned relationships among students. More recently, researchers have begun to use social network analysis to analyze school leadership, teacher communities, and the diffusion of innovations in schools. And it turns out that — as in other domains — networks matter for school change.

A social network refers to a set of people and the relationships among them. Sometimes these relationships are concentrated in small subgroups, and the larger network can be described in terms of the connections between subgroups. So we can describe a school as a network that is composed of a set of subgroups, such as grade-level or subject-area teachers, students arranged by different grade levels, and smaller cliques of students within those grade levels. A network analysis then helps us understand how expertise, information, and resources flow from person to person and from subgroup to subgroup in the social structure.

In teacher networks — the focus of this article and of our own research — the kinds of information and resources that circulate include ideas about teaching, learning, and assessment; talk about how to coordinate different school activities; stories of students and their successes and difficulties; strategies for managing...
Prologue to Planning

Big Idea #4:
Implementing new practices is like organizing a campaign in a social movement.

Implement NOW!
